

BlueTel VOIP has everything you need in a business phone system, without breaking your budget!

Voice over IP Phone System Solution

Business that utilize VoIP save money and gain more communication features. Make a smart investment with your small business by switching to BlueTel VoIP.

Simple, Flexible, and Cost Effective

VoIP is the future of voice communications for businesses.

You've probably heard about VoIP – voice communication that transmits over the Internet. VoIP can save 30% to 50% compared to traditional phone

bills, and empowers your business to go far beyond the restraints of a typical phone system solution. 4IT can evaluate your needs and pair the best-fit VoIP solution for your small business. Our solutions are scalable to accommodate your company's growth.

High Quality Standards

We're proud that we operate entirely in the US. with a dedicated and knowledgeable team to assist you with your needs, VOIP numbers can also be configured to ring simultaneously on multiple devices, such as your cell phone and your landline phone, before the call goes to voicemail eliminating the time-consuming practice of 'phone tag.' In a recent survey conducted by Sage Research, employee productivity was increased by 4 hours per week, per employee from the use of Voice over IP technology.

Cost Effectiveness

Save money compared to traditional phone bills

With VoIP, your phone data is sent over the Internet and not over traditional phone lines (although it can be received over traditional phone lines). This eliminates the need for costly local phone plans as well as long distance services. In most cases, your current broadband solution will supply enough bandwidth without slowing down your network use. The costs associated with employee moves, adds and changes which can cost a company \$100 or more per occurrence with a traditional business phone infrastructure is virtually eliminated with VoIP. This is due in part from the significantly lower operating costs of VoIP service providers in comparison to traditional phone companies.

Flexible Business Communication

Take your office phone anywhere

Voice over IP uses your LAN to transmit data, and doesn't require extra phone lines to be run through your office. There are many types of configurations, ranging from the phone being plugged between your network drop and your workstation, to Wi-Fi-based phone stations that just need to be in range of your Wireless Network. The flexibility of VoIP doesn't end in the office, your phone can go with you wherever you need to go, as long as you have a broadband connection or are in a Wi-Fi hotspot, which means your customers and employees can stay in touch just by calling your company's business phone. Don't have access to your business

Standard PBX vs. VoIP Comparison Chart

Why settle for the limitations of a premises-based PBX system. Hosted PBX from BlueTel allows your business unlimited scalability, features that allow you employees to be more productive and mobile - all with lower up-front costs and less risk than a traditional PBX.

| | Standard PBX | BlueTel VoIP |
|------------------------|---|--|
| Initial Server Cost | High cost (can be thousands of dollars) | \$0 |
| Cost Per Phone | \$170 | \$170 |
| Setup Cost | Unpredictable costs based on hours worked by the IT Tech | Low initial cost usually about \$200 |
| New Features | Additional Charges Apply | No Additional Charge |
| Call Capacity | Call capacity is limited to the number of lines purchased from the phone company, and if you exceed the amount of lines you get a busy signal | As many as you need |
| Scalability | Limited to the size of the PBX | Virtually unlimited! |
| Administrative Support | PBX features, routing, and Move/Add/Change, must be performed by IT Vendor at Additional Charge | Features are available through a web based portal where even a non tech can do all the changes. Or you could just call our Customer Service and we will make the changes for you at no additional fee. |
| Upgrading | Difficult & Expensive : upgrades to features determined by the PBX type- you must upgrade or reply to PBX vendor to find out. | The client doesn't need to do anything, Our team of highly technical techs are constantly doing upgrades |
| Disaster Recovery | If you do not pay your IT vendor for backups, you most likely will lose your routes, schedules and settings | BlueTel has all data redundant in multiple servers, & in multiple data centers around the world. |
| License Fees | Varied by Location | None |
| Long distance calls | Varied By Plan Types | Highly competitive prices |

Why BlueTel?

We're committed to becoming your #1 choice for VOIP service, providing you with competitive pricing, top features, the highest voice quality and dedicated customer service. We treat your business like our own, because we want success – nothing more or less.

We provide reliability by setting up our servers across country, and the servers take over your connections from each other. This will ensure you never get disconnected and your business can always run smoothly.

Testimonials:

"VOIP services have never been this good. Our business establishment is large with a spacious offices that lacks it's own communication line. Thanks to BlueTel, we are able to communicate with different offices without having to put up extended phone lines for them. We highly appreciate the services of BlueTel - all our needs were thoroughly satisfied."
